Art Unit: 1723

The following is an examiner's statement of reasons for allowance: Claims 6-9 are now deemed to distinguish in view of recitation, in claim 6, of the combination of a vessel having a filter, upper in-flow connector point for receiving water from a vertical wastepipe and overflow connector point for discharging overflowing water back into the vertical wastepipe, and diverter assembly having upper and lower pipe connection sockets connectable into the vertical wastepipe and valve constructed and arranged for option of flowing water directly downward through upper and lower wastepipe sockets or alternatively set to divert water into the vessel assembly for filtration.

Such combination distinguishes over DeSimone et al which has such vessel assembly and a diverter piping system having upper and lower pipe connection sockets insertable to divert water from a largely vertical wastepipe system, however not suggesting the claimed valve or configuration of valve and pipe connection sockets in a diverter assembly. Morrissey et al patent 5,403,498 is now also made of record as an assembly for optionally diverting greywater directly from domestic water system to drain or alternatively to a filtering assembly, with mechanisms for directing overflow to a vertical wastepipe, however again not suggesting the claimed configuration of valve and pipe connection sockets in a diverter assembly.

The amendments to claim 6 are supported by paragraphs 10-15 of the instant Specification and in figure 2. The claimed combination allows for a more compact arrangement with fewer plumbing components than the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
